Summary

I'm an experienced engineer with over 16 years in the IT industry, dabbling in various technologies and domains. I'm known for my proactive approach and positive attitude, tackling challenges with enthusiasm and a curious mindset. I'm all about asking questions and brainstorming fresh ideas. My work ethic revolves around commitment and understanding the heart of any problem, always aiming for the best solutions.

Experience

Vertex Inc.

Senior Clojure/Java Developer - Contract

June 2021 - Present (5 years 3 months)

King of Prussia, PA

I work as a contractor for an innovative fintech company dedicated to revolutionizing tax management for global online businesses. In a fully remote capacity, I assume the position of senior Clojure/Java developer, focusing on the development of a market-leading application aimed at providing comprehensive tax services to marketplaces and individual sellers engaged in international trade.

I also actively participate in the development of the OSeries system by Vertex Inc. (Taxamo's parent company), which is one of the leading products on the market when it comes to tax solutions.

AVILOO

Yoda Java Engineer - Contract

October 2020 - June 2021 (9 months)

Vienna, Austria

As a contractor Java Developer at Aviloo, a leading company in electric vehicle battery diagnostics, I am actively engaged in developing an advanced and innovative application. This application serves as a central hub for aggregating extensive real-time data sourced from electric cars. Working on this project involves tackling significant challenges related to performance optimization, scalability, and ensuring high availability. With a dedicated focus on delivering

an exceptional user experience, this project was a very technically demanding initiative.

Technology stack:

- Java 16
- Project Reactor, Jooq
- Postgres, Time-Series DB
- Flyway, RedG
- Cap'n Proto, RSocket, REST
- Docker
- Teamapps (<http://teamapps.org/>)
- Ansible, private cloud
- Gitlab, Youtrack

Luminor Latvija

Technical Leader - Contract

April 2020 - October 2020 (7 months)

Łódź

As a contractor working remotely, I play a crucial role in a major financial institution. This institution, essentially a bank, aims to bring together various entities from the Baltic countries onto one digital platform.

The heart of this project is building a top-notch application using a microservices setup. We're running it on Amazon Web Services (AWS) with Elastic Kubernetes Service (EKS), creating a solid tech environment. While we're using a mix of technologies, the key ones are:

- Java 11
- Spring boot (data, mvc, hateoas, security and many more)
- Spring WebFlux
- Query DSL
- PostgreSQL
- Redis
- Flyway
- OAuth2 + JWT
- Swagger and Sweaggerhub
- Spock, JUnit5
- Docker
- Kubernetes (AWS EKS)
- Jenkinsfiles
- Terraform

- Helm

- Jira, Confluence, GitLab, Jenkins

IDEMIA

System Architect

February 2019 - May 2020 (1 year 4 months)

Łódź, woj. łódzkie, Polska

Mobile phone operator services for device configuration and management

Technologies:

- Java 11, Maven
- Undertow, Vavr, Dropwizard, Prometheus
- Spock, Gatling, RestAssured
- AWS (EKS, EC2, Dynamo, S3, ECR, KMS, ELB, ALB, Shield)
- Kubernetes
- Atlassian stack (Jira, Bitbucket, Confluence)
- Git, Git Flow
- Scrum

HARMAN International

Principal Engineer

August 2018 - January 2019 (6 months)

Łódź, woj. łódzkie, Polska

I am actively involved in a project centered around the development of a telematics device that facilitates secure data exchange between vehicles and the backend infrastructure. This undertaking encompasses a wide spectrum of skill areas, ranging from Java 8 programming to working within embedded environments utilizing both Autosar and Adaptive Autosar frameworks.

Furthermore, my assignment is an integral part of the creation of the next-generation architecture platform, known as the MEB (Modular Electrification Toolkit), which is set to supersede the existing MQB platform for Volkswagen's electric vehicle lineup.

The primary focus of my development efforts revolves around utilizing Java 8 to build the core functionalities. To ensure seamless functionality, we employ MQTT (Message Queuing Telemetry Transport) as a lightweight messaging protocol, complemented by token-based authentication mechanisms to enhance security measures.

IDEMIA

Senior Software Engineer

February 2017 - July 2018 (1 year 6 months)

Lodz, Lodz District, Poland

Remote SIM Provisioning for Machine to Machine (<https://www.gsma.com/iot/embedded-sim/>)

Technologies involved:

Scala 2.12

Akka (actors, camel, HTTP, persistence, streams, testkit)

Typelevel (cats, monocle)

Spray, slick

ScalaTest, JBehave, Selenium

Redis, Cassandra, MariaDB

Docker, Docker-Compose, Kubernetes, Private Cloud

Git, Jira, Confluence, Bitbucket

Commerzbank Digital Technology Centre Poland

Software Engineer

February 2015 - January 2017 (2 years)

Lodz, Lodz District, Poland

Since joining Ceri, a subsidiary of CommerzBank, I have assumed the crucial role of a Solution Architect for a logistics application within the finance sector. My key responsibilities encompass devising comprehensive plans for the transition process, seamlessly migrating from a legacy application to the innovative solution under development. Additionally, I am entrusted with the maintenance and upkeep of the existing operational environment.

To ensure the success of our endeavors, we leverage a range of cutting-edge solutions, including but not limited to:

CQRS (Command Query Responsibility Segregation): This serves as the foundational backbone of our new application, enabling efficient separation of commands and queries.

DDD (Domain-Driven Design): By adopting this approach, we effectively tackle complex business challenges, aligning our solutions with the core domain models.

TDD (Test-Driven Development): Emphasizing the importance of rigorous testing, we adopt a proactive approach to ensure the reliability and stability of our application.

Continuous Integration: Recognizing the potential pitfalls of complacency and bugs, we prioritize seamless integration of code changes to maintain a robust development workflow.

SCRUM: Operating within an Agile framework, we embrace the principles of SCRUM, exemplifying one of my favorite quotes by Jeff Sutherland: "No Heroics. If you need a hero to get things done, you have a problem. Heroic effort should be viewed as a failure of planning."

In addition to the aforementioned solutions, our technology landscape encompasses a wide range of tools and frameworks, chosen strategically to align with project requirements:

- * Java 6 and Java 8
- * AspectJ
- * Spring (core, boot, data, web services)
- * Spring integration
- * Guava
- * Apache Commons
- * Javaslang
- * Mockito
- * Liquibase (for database CI)
- * Team Foundation Server (would prefer to work with Jenkins and Git, but TFS is corporate standard)

TomTom

Senior Software Engineer

September 2013 - January 2015 (1 year 5 months)

As a contractor from Cybercom I took a part in development of large data volume processing/conversion software (batch processing).

Technologies involved (but not limited):

- * Spring
- * Apache Hadoop
- * Apache Crunch
- * Apache Commons
- * Apache Guava
- * PostgreSQL and PostGIS
- * JTS Topology Suite

Cybercom

Senior Software Engineer

August 2013 - January 2015 (1 year 6 months)

Lodz, Lodz District, Poland

Working as a contractor for TomTom

Comarch

4 years 4 months

Mobile android developer

January 2011 - June 2013 (2 years 6 months)

Since 2011 I've been tech lead and developer for Android platform. I'm responsible for design, architecture and implementation of android corporate applications. Also as a project lead I'm responsible for analysis of client requirements (usually on-site) and deployment.

Software developer

March 2009 - March 2012 (3 years 1 month)

* Developer for CRM

Technologies involved: EJB, JavaEE, Spring, MySql, ESB

* Project analyst/developer of billing reconciliation system for Nokia company (project: Nokia Life tools) (Q1/2009-Q2-2009)

Technologies involved: EJB, Java EE, RichFaces, JMS, AspectJ

* Project analyst/architect/developer of a Mobile Service Delivery Platform project for Nokia company (project: Nokia Life Tools). The scope of the project: R&D of the SDP platform plus local deployments across Asia and Africa - three timezones, 17 people involved, cooperation with customer's HQ in Finland, R&D center in India and local offices (Q3/2009-Q4/2010)

Technologies involved: EJB, Java EE, RichFaces, JMS, AspectJ

Education

Lodz University of Technology

Master of science, Software engineering and artificial intelligence · (2004 - 2009)

Warsaw University of Technology

Graduate, IT Project Management · (2010 - 2011)
